

Hi. Today I changed my windows hello pin to use with binance. Then I installed red dead 2 via Rockstar launcher. I also installed the latest nvidia driver. I launched RDR2 and changed the graphics settings but I couldn't seem to change the resolution from 720 as it was grayed out.

download binance for windows 7 32 bit

Download Zip ▶▶▶ <https://jfilte.com/2xz7Ts>

When I logged into binance via chrome (on windows) I authenticated as normal using Microsoft Auth app on my phone and when I went back to my PC it (Microsoft widows security popup) said I could use windows hello to authenticate into apps such as binance in the future so I clicked yes. After that it asked me to create a new pin which I did. I think that somehow messed up my windows login pin. The next strange thing was my Microsoft password wasn't working at the windows login screen. It was working fine on my phone and laptop.

I should reiterate it was windows that caused all of this. I mentioned binance because that's what I was doing at the time. I don't think I was scammed, I am fairly good with that sort of thing. My antivirus and vpn were on the whole time, there was no strange activity in my device history in Microsoft or binance.

In this article, we will be looking at the steps to install the python-binance library on windows. **Python-binance** is a python library used to automate interactions with Binance cryptocurrency exchange.
